

Game-Changrs Platform Inventory Detail

This is the more detailed companion to the simplified system map. It keeps the same core model, but expands where each platform is configured, which exact config names exist, which public values are known, and where secret values are stored outside Git.

Secret values are intentionally not written into this Git-tracked file. Exact public values are included where safe, and secret-bearing items are marked as **local-only** or **dashboard-only**.

Core Components

Core Part	What It Is	Where It Is	Connected Services
Main Web App	Main Game-Changrs website and signed-in app. Includes Analytics, Coaching Marketplace, Gear Marketplace, and Technique AI.	Repo root frontend, live at game-changrs.com	Supabase main app, Render analytics API, Lovable publish, Google SSO
Analytics Backend	Serves analytics pages, player reports, report HTML, and analytics data routes.	bay-area-u15/apps/api, hosted on Render	Analytics DB, main app Supabase auth validation, Render
Local Operator Console	Local admin/operator tool for adding series, refreshing, validating, and publishing.	bay-area-u15/apps/api, local startup on port 4012	Analytics DB, worker pipeline, local env
Worker Pipeline	Discovery, ingest, compute, scoring, profile-enrichment, and intelligence generation jobs.	bay-area-u15/apps/worker	Analytics DB, local-ops workflow

External Platform Detail

Supabase Main App

This is the business-app side: auth, app tables, storage, and edge functions.

Config Item	Current Value	Stored Where	Used By
Project Ref	tpiegapsjeetvwsybjiu	.env, supabase/config.toml, restore docs	Frontend app and Supabase CLI config
Project URL	https://tpiegapsjeetvwsybjiu.supabase.co	.env, restore/config docs	Frontend client and auth-linked flows
Frontend Env Names	VITE_SUPABASE_PROJECT_ID, VITE_SUPABASE_URL, VITE_SUPABASE_PUBLISHABLE_KEY	Root .env	Main web app
Publishable Key Value	Present locally, not written into Git-tracked detail docs	Local root .env restore copy	Frontend Supabase client
Config File Linkage	project_id = "tpiegapsjeetvwsybjiu"	supabase/config.toml	Supabase CLI/project linkage
Edge Functions Path	supabase/functions	Repo	Contact, email, AI helpers, report delivery helpers

Analytics DB And Local-Ops Runtime

This is the separate analytics and operator data boundary, even though auth validation points back to the main app Supabase project.

Config Item	Current Value	Stored Where	Used By
Analytics DB Boundary	azgebbtasywunltdhdby	Restore docs and architecture docs	Analytics API, local-ops console, worker pipeline
Database URL	Present locally, not written into Git-tracked detail docs	bay-area-u15/.env restore copy	Analytics API and worker runtime
Database SSL Mode	require	bay-area-u15/.env	Analytics API and worker runtime
Schema File	bay_area_u15_schema.sql	bay-area-u15/.env	Schema/bootstrap reference
Auth Validation URL	https://tpiegapsjeetvwsybjiu.supabase.co	bay-area-u15/.env	Analytics API token validation against main app auth
Auth Validation Env Names	SUPABASE_URL, SUPABASE_ANON_KEY	bay-area-u15/.env	bay-area-u15/apps/api/src/lib/auth.js
Local Ops Port	4012	Runbooks and start commands	Local operator console

Render

Render hosts the analytics backend, not the main frontend.

Config Item	Current Value	Stored Where	Used By
Service Name	gamechangrs-cricket-api	Render dashboard / preservation docs	Hosted analytics backend
Service URL	https://gamechangrs-cricket-api.onrender.com	Render / docs	Frontend analytics calls and report routes
Working Directory	bay-area-u15	Preservation record	Render deploy layout
Build / Start	npm install / npm run api:start	Preservation record	Render service boot
Known Env Names Present	DATABASE_URL, DATABASE_SSL_MODE=require, OPENAI_API_KEY, PORT=10000	Render dashboard snapshot from preservation docs	Analytics backend runtime

Resend

Resend is the email transport layer. The app logic lives in Supabase functions and the analytics report export service.

Config Item	Current Value	Stored Where	Used By
Primary Env Name	RESEND_API_KEY	Dashboard-only secret, not stored in Git	Supabase functions and analytics report export
Known DNS Record	resend._domainkey	IONOS DNS	Domain verification / email trust
Repo Usage Points	send-report-pdf, send-connection-email, send-session-notification, request-series-onboarding, contact-seller, reportExportService.js	Repo code	Email flows

CONFIG ITEM	CURRENT VALUE	STORED WHERE	USED BY
Known Env Names Not Set In Snapshot	SUPABASE_URL, SUPABASE_ANON_KEY, LOVABLE_API_KEY, CORS_ALLOW_ORIGIN	Render dashboard snapshot from preservation docs	Configuration review only

Google SSO

Google is used as a sign-in provider, but the Google Cloud client details are not yet captured in repo docs.

CONFIG ITEM	CURRENT VALUE	STORED WHERE	USED BY
Provider In Code	google	src/contexts/AuthContext.tsx	Main app sign-in flow
Client ID / Secret	Not verified in repo docs	Google Cloud console	OAuth login
Redirect Settings	Must match live and local app URLs	Google Cloud console + Supabase auth settings	Successful Google sign-in

IONOS DNS

These are public-facing DNS values and are safe to record.

CONFIG ITEM	CURRENT VALUE	STORED WHERE	USED BY
Registrar / DNS Provider	IONOS	Preservation docs	Domain control
Nameservers	ns1028.ui-dns.com, ns1068.ui-dns.org, ns1077.ui-dns.de, ns1052.ui-dns.biz	Preservation docs	Domain DNS resolution
Apex Record	A @ -> 185.158.133.1	Preservation docs	Domain routing
WWW Record	No www record configured in captured snapshot	Preservation docs	Subdomain routing
Mail / Verification Records	_lovable, _dmarc, resend._domainkey, send SPF, IONOS MX records	IONOS DNS	Publish verification and email trust

Detailed inventory companion to the simplified system map.

CONFIG ITEM	CURRENT VALUE	STORED WHERE	USED BY
Exact Secret Value	Not written into Git-tracked detail docs	Dashboard-only / local secret source of truth	Email transport authentication

Lovable

Lovable is the publish/project surface for the frontend.

CONFIG ITEM	CURRENT VALUE	STORED WHERE	USED BY
Project Name	Game Changer Hub	Preservation docs	Project identification
Project URL	https://lovable.dev/projects/e14399ba-fbf2-42cf-bf82-4c38048ee762	Preservation docs	Lovable workspace
Linked Repo / Branch	Arth1213/gamechangrs / main	Preservation docs	Frontend publish sync
Custom Domain	game-changrs.com	Lovable project settings	Live frontend domain
Publish URL	https://gamechangrs.lovable.app	Preservation docs	Lovable-hosted frontend publish
Env Vars Visible In Lovable	None visible in captured docs	Lovable settings review	Configuration review only

GitHub

Git-Hub is the code source of truth and the anchor for backup/restore history.

CONFIG ITEM	CURRENT VALUE	STORED WHERE	USED BY
Repo	Arth1213/gamechangrs	Git remote	Source control and restore
Primary Branch	main	Git	Current source of truth
Local / Remote Branch Count	17 local / 15 remote	Git branch state snapshot	Recovery and feature history
Important Branch Families	main, phase*, cutover*, backup/*	Git	Mainline, feature history, restore checkpoints

Recommended backup attachments: restore guide, Codex prompt, simplified map, detail inventory.
